Revit Macro Study Shareback

The Revit team wanted to better understand how customers typically use macros.

Learn more about our findings and let us know if you have additional feedback in the comments below.

Revit Macro Survey

We Tested

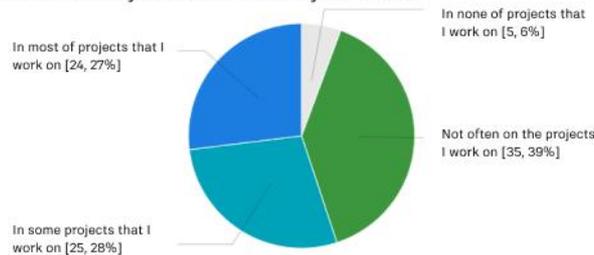

The Revit team wants to better understand the common use cases for which customers use macros. We distributed a survey on several channels and collected about 102 responses. The participants mainly consisted of BIM/CAD managers (47%), BIM/ Technical consultants (16%), and software engineers(14%).

We Learned

45% of participants stated that macros are not often used in their projects. Though 27% of participants stated that they are using macros in most of their projects.

About 38% of participants use both application and document-level macros. About 38% of participants use only application-level macros. About 20% of participants use only document-level macros.

How often do you use macros in your work?

What types of macros are you usually working with?

How Does The Revit Team Celebrate Spring

To shake off the winter and freshen up our feed, we asked the Revit team how they celebrated Spring?
